

How Rio Tinto Saved Time and Money Through Better FM

This leading mining and exploration company was frustrated with a number of obstacles to getting more out of their assets.

Rio Tinto's Obstacles...

They had manual systems that became messy and unwieldy. For instance, booking rooms or requesting changes to systems was far too difficult. There was also a need to improve productivity and spatial management.

How FM Innovations Got Around Them...

Rio Tinto and FM Innovations identified specific performance goals and developed and modified components to achieve those goals. This way, the result was measurable.

FM Innovations introduced the Aperture system and WSM Room Event Management (REM). This was a seamless step that allowed Rio Tinto to migrate into their everyday working habits.

Aperture enabled them to access plans for all their buildings and do 'mock ups' of alterations. REM helped them manage room availability, security, catering, attendance and equipment.

Results...

Rio Tinto staff can now look ahead with the diary in REM to see if a room is free before planning a date and time for a meeting or workshop.

All resources used for bookings are monitored - from security, guest lists, catering, audio visual management to teleconferencing.

They can also use the Aperture program to look at floor plans and to identify where a staff member is located.

With the help of bar-coding technology that interfaces with their space management system, Rio Tinto can track the locations of all major and minor assets.

This enables staff to easily:

- Perform annual audits
- Locate, add in, dispose of, or change existing asset records
- Control and log all PEE testing

Time and money was saved immediately.

Rio Tinto has used FM Innovations for 11 years, helping them to surpass all objectives and develop new on-going goals with additional software modules.

To find out how FMInnovations can benefit your management structure, call 03 9600 1646 today or email sales@fminnovations.com.au today.

FMInnovations provided solutions by...

- Installing a Room Event Management module to WSMenterprise.
- Installing and implementing Aperture - enabling access and modification of electronic plans for all buildings.
- Installing WSMenterprise in conjunction with Aperture creating full asset and works management capabilities
- Utilising WSMenterprise to record, monitor and manage Works, Assets and OH&S incidents.
- Creating a Visitor Management application with barcode printing and scanning capabilities.

"FM Innovations has provided support for Rio Tinto's space and asset management project since 1997. FM Innovations' service is of the highest standard and we are always assured of prompt expert assistance and practical solutions to problems"

Ros McMeekin - Former Superintendent Office Services
