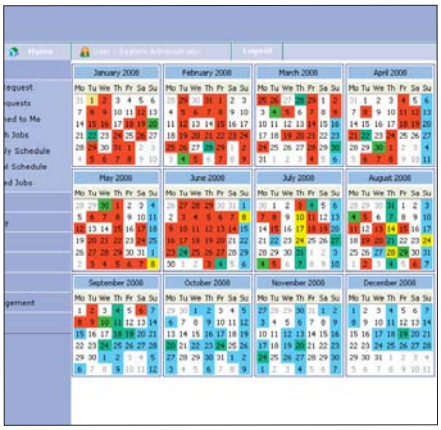
Industrial
(FM-Work for Service Providers)

Helps you achieve a standardised best practice approach with many of your critical processes, and deliver a better service.



How can WSMindustrial help?

WSMindustrial helps you to gather day-to-day operational information within your property and facility management portfolio.

Your managers at every level can gain tactical and strategic information from direct operational data. This assists and ensures better decision making.

The system manages service delivery to multiple clients in multiple locations. It manages client and contract definitions that control client administration and service functions.

Additional features of WSMindustrial

It primarily manages your service delivery functions, but it also provides service functions like room booking, visitor management or sustainability reporting.

WSMindustrial can enable you to:

- Record and manage OH&S incidents
- Manage quotations
- Generate Purchase Orders
- Amortise consumables, general expenses and;
- Generate invoices and invoice data for external accounting systems.

You can also enable multiple FM client management by including Client Contract Management within the software.

This program will allow you to customise functions across the board such as:

- Schedules of rates
- Service times (charges per time of day/week)
- Response and resolution times, and;
- The ability to apply percentage amounts as part of materials and management fees onto invoices.

WSMindustrial will adapt to many contract configurations and can service all industry types.

FM Innovations can work with you to tailor a solution for your facilities management needs - simply call 03 9600 1646 or email sales@fminnovations.com.au
