

WSMenterprise Overview

WSMenterprise is the next generation Facility Management software that is focused on tactical and strategic management of an organisation's infrastructure.

Built for rugged deployment, WSMenterprise is built to enable systems with hundreds of users to work with information to better manage their infrastructure.

WSMenterprise incorporates a number of modules...

FM-Works

An optimum Facilities maintenance management system. Manage your ad hoc work requests as well as planned work maintenance.

Room Event Management

A comprehensive online booking system that will allow multiple users to book every aspect of rooms and equipment. Reduce your central booking management activity.

Property and Lease Management

Accurately record all property lease details (including documents) as well as manage many critical activities and date's that are required to run any property portfolio.

Space and Personnel Management

Incorporate Aperture's Visual Information Manager to implement a sophisticated Space management and analysis function. Track personnel dynamically.

Visitor Management

Allow the definitive control of all visitors to facilities with reduced effort by the reception staff. Your incoming and outgoing visitor registration is now simplified and very accurate through the use of bar-coded visitor passes.

Visitor Management is integrated with the other WSM modules making a very powerful combination in controlling access to sites and immediately reporting on this status at the click of a button.

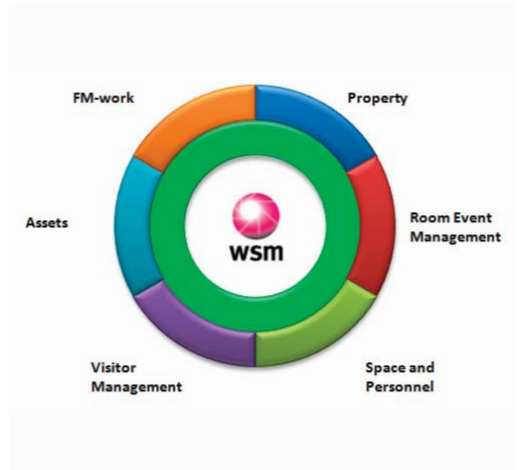

Sustainability Management

Monitor and report on the environmental impacts of operational activity and energy usage in all facility types.

Application of industry and local benchmarks can be applied to the operational data to give an ongoing record of sustainability factors that are being created by each facility and its occupants.

WSMIndustrial for Service Providers

Built on the highly successful and proven WSMenterprise platform, this module is specifically designed for service providers to help manage services delivered to unlimited clients and properties.

Give Us Your FM and Property Objectives and We'll Measurably Help You Achieve Them....

Designed by FM Innovations (FMI) in 1997, WSMenterprise has been implemented by many companies with large and complex property portfolios.

With feedback from such clients, FMI has used the latest technology to deliver improved tactical and strategic management functionality in areas of:

- Asset Management and Utilisation,
- Cost Recovery, Budget and Contract Management
- OHS Incident Recording
- Room Utilisation, and;
- Policy Tracking and compliance.

FMI embraces technology that will power industry software development into the future to allow WSMenterprise to deliver better desktop and web based services to their user base.
